
Badgecraft

1. About the tool

Badgecraft is an international tool for digital recognition of skills and achievements. A platform where users can create, manage and show recognition by completing quests and obtaining digital Open Badges.

2. How Can You Use It?

Users can create engaging and motivating quests that allow participants to earn badges (recognition) through a variety of activities. They can also design complex systems of tasks that lead to digital certification in specific areas. Participants complete quests by uploading evidence in various formats, and the learning can be reviewed through different methods, including peer, self, and assessor evaluation.

The quests in Badgecraft or their whole systems can be used to organize online trainings, to structure offline education activities or to complement them. Teachers and trainers can assign the quests as homework to reflect on the competencies outside their classroom, use it as an additional source of recognition and further motivate the learners.

3. Conditions of use / Limitations

Badgecraft can be used both on desktop and in the mobile app. Specifically for mobile phones, there is an option to download an app called Badge wallet, where participants collect and overview Badges upon completing the quests.

The tool is free of use for up to 10 activities, 100 created badges and 100 users per organization.

4. Example of use

[HERE](#) an example of a quest related to Green Competencies, which gives you a specific idea of structure. Now, we have created for you a user tutorial on how you can create your own quests and boost the learning experience.
